

HDI EMBROIDERY BROW AFTER CARE INSTRUCTIONS

IMPORTANT

HOW YOU TAKE CARE OF YOUR NEW HDI EMBROIDERY BROWS OVER THE NEXT 7 DAYS WILL ULTIMATELY DETERMINE ITS HEALING, COLOUR RETENTION, FINAL APPEARANCE AND LONGEVITY.

WHAT TO EXPECT FOLLOWING YOUR PROCEDURE

Apply Calendula Healing Balm to the microbladed area in the morn, afternoon & evening. Make sure you apply 3-4times a day for the full 7-10 days to avoid them becoming dry or feel tight. You may experience swelling that can be managed with soft gel ice packs. Place chilled gel packs (in refrigerator only) in a plastic bag before applying to protect the microbladed area from any moisture. **The following day your brows may appear darker or show some redness.** This is normal as the brows enter the natural healing process the colour will fade throughout the next 7-14 days.

DO NOT PICK FLAKING OR SCABBING

As the skin starts the natural healing process, you may experience some flaking and/or scabbing. Picking or peeling any flakes or scabs can cause loss of implanted pigment and scarring. Refrain from touching tattooed area except when applying calendula healing balm or coconut oil.

AVOID CERTAIN ACTIVITIES AND DONT USE SOAPS OR CREAMS

Pools, Jacuzzis, tanning, excess sweating, facials and saunas should also be avoided for a period of at least 10 days or until tattooed area is fully healed. Skin creams and products containing Retin-A, AHA or any kind of skin peel must not be used directly on the tattooed area as they will fade and possibly distort the tattoo, sun block should always be applied over tattoos. When washing your face, refrain from using soaps, and creams on the tattooed areas for the heal time specified(next day). When showering or bathing apply a thick layer of coconut oil and avoid putting your head directly in the shower head stream.

FINAL APPEARANCE WILL TAKE 6-8 WEEKS

The colour immediately after tattooing will appear very sharp and dark but will soften and fade considerably as the healing process concludes. The final appearance of the tattooed area should not be considered for at least 6-8 weeks after the final visit.

TOUCH UP MAY BE REQUIRED

You may need to reshape/augment area and is not usually done until after 4-6 weeks after the initial procedure. A touch-up appointment is crucial with the HDi Embroidery Brow procedure and its preferable over a less conservative initial procedure. Less is definitely more when it comes to the HDi Embroidery Brows. This is a custom built brow and may take up to 3 times to ensure the pigment in the skin and achieving your final desired brow look.
